

# Infant Foods Tried at Home

## Iowa Child and Adult Care Food Program

Revised July 2019

Good communication between parents and care providers is essential for successful infant feeding. Solid foods should be introduced when an infant is developmentally ready around six months of age and of appropriate texture for the infant's abilities. Solid foods should be served after parents have introduced them at home in consultation with the infant's health care provider. Care providers should not be the first to introduce new foods.

Parents: Complete the following form, and update whenever new foods are introduced.

Care providers: Make the form accessible for parents to update on an ongoing basis. Use this form as a daily reference.

Infant's name \_\_\_\_\_ Birthdate \_\_\_\_\_

Identify new foods introduced to your infant at home and the preferred food texture (pureed, mashed, ground, finely chopped) by entering the date it was introduced and meals when it should be served: breakfast (B), morning snack (AM), lunch (L), afternoon snack (PM), supper (S), late night snack (LNS).

Food	Date & Meal(s), Texture	Food	Date & Meal(s), Texture
<b>Iron-fortified infant cereals</b>		<b>Bread/crackers for snacks only</b>	
Rice		Bread/toast/rolls
